

UK Baseline Emissions Footprint & Carbon Reduction Plan

Supplier name: Regeneron Pharmaceuticals
Publication date: November 2024

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases (GHG) that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline year emissions (2022)	Total (tCO ₂ e)
Scope 1	7
Scope 2 (Location-based)	19
Scope 3	0
Total Emissions	26

Baseline emissions for Regeneron UK Limited ('Regeneron UK') are reported for calendar year 2022.

Current Emissions Reporting

Current emissions reporting (2023)	Total (tCO ₂ e)
Scope 1	12
Scope 2 (Location-based)	22
Scope 3	0
Total Emissions	34

Current emissions for Regeneron UK Limited ('Regeneron UK') are reported for calendar year 2023.

Emissions Reduction Targets Carbon Reduction Projects

Regeneron Pharmaceuticals, Inc., the parent of Regeneron UK, has a global environmental target to reduce our GHG emissions intensity. By 2025, we will reduce our global combined Scope 1 and 2 (market-based) GHG emissions per square meter by 30% based on a 2016 peak baseline. As of December 31, 2023, our global GHG emissions intensity has decreased 42%.

Carbon Reduction Projects

Completed carbon reduction initiatives

Regeneron UK occupies leased office space and the energy consumption and associated with GHG emissions at the site are less than 1% of the group's carbon footprint. In 2023, there were no energy efficiency actions undertaken by Regeneron UK as a tenant at this location.

2023 progress

Regeneron has a global climate action plan to meet our existing GHG emissions targets and prepare for the future. Our action plan focuses on investing in energy-efficient technologies, increasing our uptake of renewable energy through activities such as direct procurement via power purchase agreements and evaluating an electric vehicle pilot for our U.S. commercial and medical affairs fleet. In 2023, Regeneron achieved a 42% reduction in global GHG emissions intensity based on our 2016 baseline (for more details see Regeneron's 2023 Responsibility Report [here](#)).

Declaration and Sign-Off

Emissions have been reported and recorded in accordance with the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.²

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the Corporate Value Chain (Scope 3) Standard.³

Signed on behalf of the Supplier: Alan Kane, Director UK Market Access
